City of San Diego Public Works Department/E&CP Campus Point Drive Emergency Storm Drain Repair Project

Construction Fact Sheet: October 10, 2011

Project Background and Overview

This project will restore storm drain and water utilities to Campus Point Drive near the intersection of Campus Point Court. The project involves the removal and replacement of deteriorated storm drain pipe (switching from corrugated metal to reinforced concrete), the removal and replacement of damaged water mains and the restoration of the sewer main, reclaimed water delivery line and other dry utilities.

Lane Closures

This emergency work will involve the closure of different limited segments of Campus Point Drive during the construction process. The road closures will be confined and will allow traffic flow through alternating temporary lanes. There is the possibility that a complete road closure will be required during late night hours. The City will work to limit traffic impacts during each phase of the project.

Upcoming Construction Activities

(Emergency construction began on Saturday, October 08, 2011.)

Phase 1: Stabilization of the roadway to prevent further damage to any utilities and to allow partial reopening of Campus Point Drive (COMPLETED).

Phase 2: Repair damaged water, sewer and dry utilities to restore full service to surrounding businesses (Temporary systems are in place and all utilities are available).

Phase 3: Storm Drain pipe replacement. Upon completion of the pipe replacement, the pipe trench will be filled and the roadway pavement restored. Construction should be completed and the roadway will be fully open.

Project Benefits

- Replacement of deteriorated pipe
- Elimination of a potential safety hazard
- Improvement of the City's storm drain system.
